

GIC Subcommittee Roles & Responsibilities

Our success depends on the dedication of our volunteer subcommittees. Each team plays a vital role in shaping the conference experience. If you are passionate about implementation science and want to leave your mark on GIC 2027, we invite you to join one of the following groups.

As a valued contributor, your name, photo, and brief biography will be featured on the conference website, and your service will provide tangible, CV-strengthening experience that demonstrates leadership and commitment to the field. While membership to the GIS is strongly encouraged, subcommittee members do *not* need to be current members of the Global Implementation Society.

- **Program Development & Scientific Subcommittee**

Charged with creating a dynamic agenda that maintains the highest standard of scholarly exchange while supporting experienced practitioners across sectors and disciplines.

This team is the intellectual engine that builds the content of the conference. They are responsible for the rigorous peer-review of submitted abstracts, ensuring that only the most impactful research and practice-based evidence is selected. Following the review process, this committee designs the overarching conference agenda, creating a program consisting of keynote addresses, parallel sessions, and workshops that reflects the latest advancements in implementation science in South Africa and beyond.

- **Sponsorships, Finance, & Fundraising Subcommittee**

Charged with securing the partnerships resources to make the conference accessible, inclusive, and exceptional.

This team works behind the scenes to build the financial foundation of GIC 2027. Their primary goal is to identify and secure funding opportunities to support conference operations, as well as scholarship programs for delegates from low- and middle-income countries, speaker honoraria, and subsidized registration costs. They ensure that financial barriers do not prevent both experienced and emerging implementation science leaders from participating.

- **Media & Communications Subcommittee**

Charged with building excitement and keeping the community informed.

This team is the voice of the conference. They develop and execute a

comprehensive communications strategy, from crafting compelling marketing campaigns to drive registration, to producing detailed informational materials about the venue, travel, and schedule. They manage social media posts and ensure that delegates have all the information they need to navigate the conference seamlessly.

- **Logistics Subcommittee**

Charged with delivering a flawless on-the-ground experience.

This team turns the conference vision into reality. Operating primarily on-site in Cape Town, they manage the physical and operational details that make the event run smoothly. From coordinating with the venue and managing audio-visual equipment to directing volunteers, organizing registration desks, and troubleshooting unexpected issues, this committee ensures that delegates can focus entirely on the science and networking, free from distraction.
